Kim Jong Moon Web3 UI & Custom Sticker Packs

Here is a complete look at the user interface and custom asset integration for the Kim Jong Moon cryptocurrency platform. The design balances a highly functional Web3 environment with an entertaining, meme-driven community experience.

Complex contract features are visualized clearly using color-coded metrics and custom circular feature cards, breaking down the 7% BNB Redistribution, the 60-minute auto-payouts, and the 5% Buyback/Marketing splits.

To fuel community engagement and the platform's online Meme Creator, a massive library of custom character assets was integrated. This includes a full grid of expressive sticker packs (featuring scenarios like "Connection Lost," "Execute," and "WannaCry") designed for Telegram, social sharing, and intuitive drag-and-drop meme building.
