Quick Recap

Overview

The Claims Operations Dashboard provides operators with a comprehensive interface for managing and processing insurance claims through automated and manual workflows. The system leverages Ora AI for automated claim processing while enabling manual intervention when blockers require operator attention.

Navigating Claims Operations Management after logging in as Jim Halpert(Claims Operator)

After logging in as **Jim Halpert (Claims Operator)**, the homepage shows the **Claims Operations Dashboard**, which gives a real-time overview of claim volumes, bottlenecks, and performance metrics.

1. Accessing the Claims Operations Dashboard

- Jim signs in and lands on the **Claims Operations Dashboard**, with the title clearly shown at the top left and his profile at the top right.
- The top tiles summarize key counts: **Total Claims**, **Intake Triage**, **Policy Verification**, **Assessment**, **Payment Processing**, and **Claim Status**, each showing how many claims sit in that stage.

2. Monitoring SLA Breaches and Portfolio Funnel

- On the left, the **SLA Breaches** panel lists claims that have breached or are at risk of breaching, including reference IDs, insured names, and the exact stage (for example, Intake Triage or Policy Verification) with red badges.
- In the center, the **Portfolio Funnel** visualization shows claim volumes by stage (Total Claims, Intake Triage, Policy Verification, Assessment, Payment Processing, Claim Status) along with how many blockers exist in each step, helping you see where work is backing up.

3. Managing tasks and work queues

- On the right, the **My Tasks** widget allows Jim to tick predefined tasks such as reviewing priority claims or policy verification follow-ups, and to **add a new task** in the text box, tracking completion and pending counts.
- The bottom left includes the **Exception / Error Queue** (e.g., Coverage Dispute, Missing Documentation, Payment Hold, Liability Assessment) with red counters, and a **Claims Handling Queue** summarizing New Claims, In Assessment, and Pending Payment workloads.

4. Tracking team performance and investigations

- The lower center panels show **Adjuster & Examiner Summary** (number of adjusters and average accuracy/closure metrics) and **Fraud & Investigation Summary** (pending fraud cases and average investigation age in days), highlighting investigation health.
- On the right, **Team Performance Summary** lists individual team members (such as Sarah Martinez, James Kim, Emily Chen) with their personal performance scores, while **Operational KPIs** show STP rate, Ora AI automation rate, first call resolution, and customer satisfaction gauges.

5. Navigating to active claims operations

- From the left sidebar, Jim clicks the **second tab** (Claims Operations icon) to move from the overview dashboard to the operational view.
- This view presents the list or board of **claims currently in processing**, organized by stage and ready for Jim to open individual claims, work blockers, and progress items through the lifecycle.

Getting Started

Accessing Claims Operations

- Log into the Workbench as an operator (e.g., Jenny Smith or Jim Halpert).
- Navigate to the 2nd item in the sidebar navigation menu.
- The Claims Operations Dashboard opens, displaying active claims and key performance metrics.

Dashboard Overview

Upon accessing Claims Operations, the dashboard displays:

- **Notifications panel:** Right side showing newly received claims in real-time.

- **Key metrics cards:**

- Active Claims count
- Automation vs Manual
- Total Reserves amount
- % Within SLA

- **Search functionality:** Search claims by number, insured name, or policy number.
- **Filter options:** All Stages and All Priorities dropdowns for refined viewing.
- **Action buttons:** Claims Archive and New FNOL (First Notice of Loss) buttons.

Understanding Claim Complexity Levels

Claims are organized into three complexity categories that determine processing priority and manual intervention requirements.

Non-Complex claims – how to recognize and handle

Non-Complex claims are routed to the **Automated Processing** queue and are designed to close quickly with minimal human touch. On the board, these cards appear in the **Non Complex** view with green framing and a green AI badge that might say **“Non-Complex Claims”**.

Typical signals in the tooltip

When you open the tooltip on a Non-Complex claim, you will usually see combinations of points such as:

- Historical pattern match: High similarity (for example, 94%) to hundreds of previously auto-resolved claims, with zero fraud indicators and a very low AI complexity score (around 2/10).
- Strong document intelligence: All required documents present, high ML extraction confidence (≈96%), good image quality, timestamps and GPS matching the insured location, and no discrepancies between policy and narrative.
- Clear coverage: Peril explicitly listed, no exclusions or tricky endorsements, deductible clearly defined, no sub-limits involved, coverage certainty index near 98%.
- Low-risk customer profile: Clean payment history, low historical claim frequency, cooperative communication tone, no red-flag keywords, and high behavioral score.
- Clean sentiment / no injury: NLP shows cooperative language, no attorney involvement, no injury or third-party mentions, and high semantic consistency between narrative and data.

All of this is usually summarized as an **AI triage complexity score of 2–3/10**, which is displayed as the last bullet in the tooltip.

What the operator should do on Non-Complex claims

- Work directly from the **Non Complex** board: open cards from whichever stage column they are in (Intake Triage, Policy Verification, Assessment, Payment Processing, or Claims Status) and follow the standard scripted steps.
- Trust the automation: unless something looks obviously wrong, let automated rules, vendor routing, and payments proceed; these are the “straight-through” cases.
- Use the tooltip as confirmation: quickly scan the bullets to reassure yourself that documentation, coverage, sentiment, and fraud checks are all clean before approving or

advancing the claim.

Complex claims – how to recognize and handle

Complex claims are routed to the **Manual Review Queue** and require active handling by an adjuster or specialist. On the board, these appear in the **Complex** view with red column framing and red AI context (for example, “Complex Claims”) around the cards.

Typical signals in the tooltip

When you hover the AI badge on a Complex claim, you will see one dominant reasoning type (for example, “High-Value Financial Exposure” or “Fraud Investigation Triggers”) with bullets such as:

- High-value financial exposure: Large reserves (≥\$200K), significant property damage, possible third-party liability, subrogation potential, and mandatory senior manager oversight.
- Subrogation / recovery: Clear third-party fault, legal team involvement, multiple witnesses, and active recovery tracking.
- Medical or injury complexity: Moderate or severe bodily injury, need for IME (independent medical exam), evolving treatment plan, and high reserve-development risk.
- Fraud or SIU triggers: Multiple anomaly indicators, inconsistent timelines, high prior claim frequency, conflicting documents, and SIU referral.
- CAT / litigation / regulatory issues: Disaster-zone claims, high predicted litigation probability, mandatory state reporting, specialist adjuster assignment, or large documentation sets that require manual review.

These claims typically show **AI complexity scores in the 6–10/10 range**, indicating they must stay in the Complex queue for manual handling.

What the operator should do on Complex claims

- Always work from the **Complex** board and prioritize higher-score or overdue SLA cards first.
- Read the reasoning bullets carefully to understand *why* the claim is Complex (high reserve, injury, fraud suspicion, CAT, litigation risk, etc.) and plan your actions accordingly (e.g., schedule IME, trigger SIU, loop in legal).
- Document every key action and escalate early to senior adjusters or managers when the tooltip mentions requirements like “senior management oversight”, “claims counsel consultation”, or “regulatory reporting obligations”.

Claim Processing Stages

Every claim progresses through five distinct stages during its lifecycle:

1. **Intake Triage** - Initial claim receipt, document collection, basic validation.
2. **Policy Verification** - Coverage validation, policy terms confirmation, eligibility check.
3. **Assessment** - Damage evaluation, liability determination, coverage analysis.
4. **Processing** - Settlement calculation, negotiation, approval workflows.
5. **Claims Status** - Final review, payment posting, closure documentation.

Stage progression: Claims automatically advance through stages when all requirements are met. Manual intervention pauses progression until the blocker is resolved.

Automated Processing with Ora AI

How Ora AI Processes Claims

Ora AI provides intelligent automation for claim processing:

- **Document extraction:** Automatically extracts data from claim forms, police reports, medical records, invoices.
- **Policy matching:** Validates coverage against policy terms and conditions.
- **Damage assessment:** Analyzes photos, repair estimates, and third-party reports.
- **Reserve calculation:** Sets appropriate reserves based on claim type and exposure.
- **Workflow routing:** Moves claims through stages automatically when criteria are met.

Visual Indicators for Automated Processing

Claims in automated processing display specific visual cues:

- **AUTO badge:** White chip "Ora AI" indicator on claim cards shows Ora AI is handling the claim.

- **Progress indicators:** Green progress bars show stage completion percentage.

- **Stage labels:** Current stage highlighted in green (e.g., "Intake Triage," "Policy Verification").
- **Movement animation:** Green border flash when claim transitions between stages (5-10 seconds)

Visual Status Cues

Different border colors and animations indicate claim state:

- **Blue outline (5-10 seconds):** New claim received at Intake Triage.
- **Green border flash:** Claim transitioning from one stage to the next.
- **Amber/yellow outline:** Manual intervention occurred; operator should monitor progression.
- **No outline:** Standard automated processing without recent manual involvement.

Manual Intervention and Blockers

Blocker: Resolving Policy Blocker in Intake Triage(CLM-2024-024)

Identify Blocker in Intake Triage Queue

- In the Intake Triage queue, look for claims flagged with a warning or a yellow “blocker requiring attention” banner.
- Click on the warning chip of the affected claim to review blocker details.

Dear undefined, We have completed our review of your recent claim submitted on 2024-02-02. Unfortunately, we must decline this claim as our records indicate that policy POL-2023-HTL-5599 expired on 2024-01-28, which is undefined days prior to the reported loss date of 2024-02-02. As per the policy terms and conditions, coverage is only valid during the active policy period. Since the loss occurred after the policy expiry date, we are unable to provide coverage for this claim. If you believe this determination is in error or have additional information regarding policy renewal that we may not have on record, please contact us within 30 days. Best regards, Jessica Thompson Accenture Insurance Operations Team On behalf of Michael Rodriguez, Senior Claims Adjuster Email signature will be sent on behalf of the assigned Claims Adjuster	
	

Escalating to Manager

- If you choose “Escalate to Manager,” the system will notify your management for exception review and further instructions.

**Escalate to Manager**

Request management review for exceptions

Summary

- Policy expiry blockers are flagged in red at Policy Verification.
- Ora AI provides clear reasons, critical markers, and concise policy vs loss date comparison in the popup.
- Users can decide to decline and communicate directly to the client, or escalate for a special decision as per internal process.

Blocker: Reserve Increase in Assessment Section(CLM-2024-001)

A typical scenario in the **Assessment** section is when Ora AI identifies that the current reserve amount for a claim may be insufficient. This triggers a blocker, prompting the operator to refer the claim to a claims adjuster for approval.

Identifying the Reserve Increase Blocker

- In the Assessment queue, look for a claim displaying a yellow "blocker requiring attention" alert.
- Click **on warning chip** to investigate further.

Reviewing Ora AI Reserve Analysis

- A detailed popup appears, highlighting:
 - Current reserve and Ora AI's suggested reserve with the calculated difference.
 - Explanation of why a higher reserve is necessary, cross-referencing inspection, engineering, and policy documents.
 - A calculation breakdown shows itemized sources and amounts for each addition (e.g., damage estimate, temporary relocation, code upgrades).
 - Supporting documents are listed with clickable links for reference and justification.

\$

Reserve Increase Recommended

Ora AI analysis suggests current reserve may be insufficient

Ora AI Reserve Analysis

91% Confidence

Ora AI has analyzed the initial reserve of \$200,000 and identified significant discrepancies with actual damage scope. Cross-referencing the Field Inspector Report, Structural Engineering Assessment, and Building Code Analysis reveals foundation damage extending beyond initial estimates. The structural engineer's report indicates load-bearing wall compromise requiring full replacement rather than repair. Additionally, mandatory building code compliance upgrades per Section 4.2.1 add substantial costs not accounted for in the original reserve. When combined with extended temporary relocation needs and industry-standard contingency reserves for structural work, the total required reserve increases to \$278,000—a \$78,000 increase from current levels.

Current Reserve	Ora AI Suggested	Difference
\$200,000	\$278,000	+\$78,000

Calculation Breakdown

5 Sources Analyzed

Hide Details

Initial Damage Estimate 95% Initial assessment from field inspection on Dec 5, 2024 Source: Field Inspector Report - CLM-2024-1103.pdf	\$100,000
Structural Engineering Assessment 92% Structural analysis revealed foundation damage requiring additional repairs Source: Engineering Report - STR-ENG-4421.pdf	\$95,000
Code Compliance Upgrades 88% Required upgrades to meet current building codes per Section 4.2.1 Source: Building Code Analysis - CODE-2024.pdf	\$38,000
Temporary Relocation Costs 90% Additional living expenses coverage for 3 months during repairs Source: Policy Document - POL-2024-8821.pdf (Section XII)	\$25,000
Contingency Reserve (8%) 85% Standard contingency for unforeseen complications in structural repairs Source: Industry Standards - Similar Claims Data	\$20,000
Total Recommended Reserve	\$278,000

How Ora AI Calculated This Recommendation

Ora AI analyzed 5 source documents including inspection reports, engineering assessments, building code requirements, policy coverage details, and historical claims data. The calculation aggregates direct repair costs, code compliance requirements, additional living expenses, and applies an industry-standard contingency reserve based on similar structural damage claims in the region.

Why \$278,000 Instead of \$200,000?

Proceed to Referral

Proceed to Referral

- If the suggested reserve increase is justified, click the **Proceed to Referral** button at the bottom of the popup.

Submitting a Referral to Claims Adjuster

- In the referral modal:
 - Select the appropriate claims adjuster from the dropdown.
 - Add referral notes explaining why the reserve increase is needed, referencing the supporting analysis and documents.
 - Click **Send Referral** to submit for adjuster approval.

The screenshot shows a modal titled "Refer to Claims Adjuster". It contains a dropdown menu labeled "Select Claims Adjuster" with the selected option "Sarah Chen - Claims Adjuster (Property & Casualty)". Below this is a text area labeled "Referral Notes" containing the text "This is the reason why this increase is recommended". At the bottom, there are two buttons: a white "Back" button and a green "Send Referral" button.

Summary

- The reserve increase blocker uses Ora AI analysis and document insights to substantiate the need for a higher reserve.
- The operator's workflow: review details, refer to an adjuster, and justify with contextual notes and attachments.
- Supporting evidence and automated calculations enable clear, auditable, and justified escalation for reserve approvals.

Blocker: Outstanding Premium Payment in Assessment Section(CLM-2024-022)

Within the **Assessment** section, users might encounter a blocker when Ora AI detects no premium payment on the relevant policy. This prevents the claim from proceeding until payment status is verified.

Identifying the Premium Payment Blocker

- Look for a claim in the Assessment queue with a **red warning chip** indicating a blocker.
- Click **Open** to investigate the issue.

Request for Corrected Invoice - INV-2024-1847 - Policy Holder Name Correction

Email Body *

Ora AI generates both subject and body

Dear Precision Repair Services Billing Team,

Thank you for submitting invoice INV-2024-1847 for the repair services provided.

We have identified a discrepancy that requires correction before we can process payment:

Current Invoice Details:

- Invoice Number: INV-2024-1847
- Client Name on Invoice: ABC Manufacturing Ltd
- Invoice Amount: \$45,750

Correction Required:

Please reissue this invoice with the following corrected client information:

- Correct Policy Holder Name: ABC Manufacturing Group PLC

All other invoice details should remain the same. This correction is necessary to match our policy holder records for claim CLM-2024-021.

Please send the corrected invoice to this email address at your earliest convenience. If you have any questions, please don't hesitate to contact me.

Best regards,

Jenny Smith

Accenture Insurance Operations Team

On behalf of Sarah Chen, Senior Underwriter

Request vendor to reissue invoice with policy holder name matching claim records

Escalate to Finance

- Fill in the finance operations address and message.
- Use **Generate with Ora AI** for generating a clear escalation template.
- Click **Send to Finance Operations** to complete the internal escalation.

Invoice Client Name Discrepancy - CLM-2024-021 - INV-2024-1847

Email Body *

Ora AI generates both subject and body

Dear Finance Operations Team,

I am escalating an invoice discrepancy identified by Ora AI during the processing of claim CLM-2024-021.

Invoice Details:

- Invoice Number: INV-2024-1847
- Vendor: Precision Repair Services
- Invoice Amount: \$45,750

Discrepancy Identified:

- Client Name on Invoice: ABC Manufacturing Ltd
- Policy Holder Name (Correct): ABC Manufacturing Group PLC

The invoice submitted by Precision Repair Services shows the client name as "ABC Manufacturing Ltd", which does not match our policy holder name "ABC Manufacturing Group PLC".

Please review and coordinate with the vendor to obtain a corrected invoice with the proper policy holder information before we process payment.

Best regards,

Jenny Smith

Accenture Insurance Operations Team

On behalf of Sarah Chen, Senior Underwriter

Internal escalation to Finance Operations for invoice review and vendor coordination

Summary

- Invoice discrepancies are clearly flagged by Ora AI, showing the invoice and insured names side-by-side.
- Users can escalate internally or resolve externally, always with contextual AI-powered email support for rapid closure and auditability.

Missing Documentation when manual intervention is required(CLM302917)

Processing

Request Document

Payment Processing

- **Missing documentation:** Required documents not provided by insured or broker.
- **Data conflicts:** Inconsistencies between submitted documents and policy records.
- **Coverage questions:** Ambiguous policy terms requiring underwriter clarification.
- **High-value thresholds:** Claims exceeding auto-approval limits.
- **Fraud indicators:** Unusual patterns triggering manual review.

Blocker Visual Indicators

Claims with blockers display distinct visual markers:

- **DOC REQUIRED badge:** Orange/amber badge indicating missing documentation.
- **Blocker descriptions:** Text explaining what's needed (e.g., "Awaiting documents from broker").
- **Amber outline:** Yellow/amber border around claim card to differentiate from automated claims.
- **Alert icons:** Warning or info icons highlighting the specific blocker type.

Request Missing Document Modal

The request interface provides comprehensive context:

- **Document identification:** Clear statement of missing document (e.g., "Missing Document: Fire Protection Certificate").
- **Requirements list:** What's needed, format requirements, completion criteria.
- **Impact statement:** Explains processing pause and next steps once document received.
- **Email composition:**
 - Pre-filled From and To addresses
 - CC and BCC options for additional recipients
 - Subject line auto-generated (e.g., "Document Request - Claim CLM822913")

- Email body with claim details and document requirements
- **Generate with Ora AI:** Button to auto-generate professional email content.
- **Send Request button:** Submit email to broker.
- **Cancel option:** Abort request and return to dashboard.

Email Generation

Ora AI generates professional, context-aware emails:

- **Auto-populated fields:** Claim number, policy number, insured name, claim amount.
- **Clear request:** Specific document needed and deadline.
- **Professional tone:** Courteous language appropriate for broker communication.
- **Editable content:** Operators can modify generated text before sending.

Once the email is sent, the claim status updates to "Awaiting Response" with a status message visible on the claim card.

Request Missing Document

This claim is blocked and requires your attention. Send an email to the broker requesting the missing documentation.

Missing Document: Fire Protection Certificate

The claim requires a Fire Protection Certificate to proceed with assessment.

What's Needed

- Fire Protection Certificate from the broker
- Document must be in PDF format
- All required fields must be completed

Impact on Processing

The automated processing is paused until this document is received. Request the document from the broker via email, and once provided, Ora AI will validate and continue processing automatically.

Claim Status Updates and Progression

Status Transitions

Claims display different states based on their processing status:

- **Awaiting documents from broker:** Claim paused pending external input, displays blue info banner.
- **Awaiting Response:** Email sent, waiting for broker to provide documents.
- **Document received:** Amber outline remains but claim resumes automated processing.
- **In Progress:** Actively being processed by Ora AI through current stage.

- **Blocker resolved:** Claim automatically advances to next stage once blocker cleared.

The image shows a claim card for CLM368988, Patricia Taylor. It displays the policy number POL39089 and a claim amount of \$12,897. A progress bar indicates the claim is 1/5 stages complete, with a status of 'Coverage Fit + Liability Analysis' at 18%. Below the progress bar, there is an 'Assessment' section with a green 'Open' button and a blue 'Review' button. At the bottom, there is a large blue button labeled 'Assessment'.

Operator Actions and Controls

Pause Automated Processing

Operators can manually pause Ora AI processing:

The image shows a status bar for 'Automated Processing'. It indicates that 12 open submissions are in the queue and 25 have been completed today. A red 'Pause' button is visible on the right side of the bar.

- **Pause button:** Click "Pause" button within claim card.
- **Effect:** Automated processing halts immediately at current stage.
- **Use cases:** Operator needs to review documents, awaiting additional information, manual assessment required.
- **Visual indicator:** Processing bar stops updating, status changes to "Paused."

Resume Processing

To restart automated processing after pause:

The image shows the same 'Automated Processing' status bar, but now it displays 11 open submissions in the queue and 23 completed today. A green 'Resume' button is visible on the right side of the bar.

- **Resume action:** Available after manual review completed.
- **Effect:** Ora AI resumes processing from paused stage.
- **Status update:** Text above claim card updates to show next processing stage.

View Claim Details

Access comprehensive claim information:

- **Open button:** Click "Open" button on claim card.

- **Detail panel:** Opens submission details with:
 - Key Information section (policy details, dates, amounts)
 - Next Steps with assigned operators and due dates
 - Attached documents list
 - Workflow history showing all stage transitions

Review and Workflow Options

Additional actions available from claim card:

- **Review button:** Opens claim for detailed examination (currently under development).
- **View Workflow Details:** Shows stage-by-stage progress with completion percentages.
- **Contact Broker:** Direct communication option for claim-related questions.
- **Stage buttons:** Quick navigation to specific processing stage.

Claims Archive

Accessing Completed Claims

View all closed and completed claims:

- **Claims Archive button:** Located in top-right dashboard header.
- **Archive view:** Displays grid of completed claims with summary cards.

Viewing Archived Claims

Each archived claim card shows:

- **Claim number and company:** Identifier and insured name.
- **Claim Type:** Property, liability, auto, workers-comp, etc.
- **Paid Amount and Loss Date:** Financial details and incident date.
- **Reported Date:** When claim was filed.
- **Complexity badge:** Non Complex, Medium Complex, or High Complex indicator.
- **View Claims button:** Opens archived claim details for reference.

Understanding the Claim View

This section explains how to navigate a specific claim record within the Claims Archive, covering the Overview, Workflow, Documents, and Audit Trail tabs.

1. Overview Section

When you first open a claim, you land on the **Overview** tab. This dashboard provides a high-level snapshot of the case:

- **Financial Summary:** View key financial metrics, such as reserves, payments made, and outstanding amounts.
- **Claim Details:** Access core information about the incident, policyholder, and coverage status.
- **AI Extracted Data:** Review data points automatically pulled from documents by the Ora AI system for quick reference.

A screenshot of the Overview tab for claim CLM-2023-112. The claim title is 'Data migration error - client data recovery costs'. The policyholder is 'Global Tech Solutions Inc', the broker is 'Premier Risk Advisors', the loss date is '1 Dec 2023', and the service is 'Remote Services'. The Financial Summary table shows: Paid Indemnity (£38,000), Paid Fees (£4,000), Total Paid (£42,000), Outstanding Indemnity (£0), Outstanding Fees (£0), Total Outstanding (£8,000), Recoveries (£0), and Total Incurred (£42,000). The Claim Details section shows: Policy Number PDC-2023-015-4412, Claim Type Professional, and Date of Loss 1 Dec 2023.

Financial Summary	
Paid Indemnity	£38,000
Paid Fees	£4,000
Total Paid	£42,000
Outstanding Indemnity	£0
Outstanding Fees	£0
Total Outstanding	£8,000
Recoveries	£0
Total Incurred	£42,000

Claim Details	
Policy Number	Claim Type
PDC-2023-015-4412	Professional
Date of Loss	Reported Date
1 Dec 2023	1 Dec 2023

2. Workflow Tab

Click on the **Workflow** tab to track the progress of the claim:

- **History Log:** See the complete chronological history of the claim's status changes and processing steps.
- **Current Status:** Identify exactly where the claim currently sits in the lifecycle (e.g., investigation, negotiation, settlement).

3. Documents Section

Navigate to the **Documents** tab to manage all files associated with the claim. You can **preview** or **download** items such as:

- **Incident/Police Reports:** Official records of the event.
- **Completed Claim Forms:** The initial submission forms from the claimant.
- **Evidence Photos:** Images documenting damage or loss.
- **Settlement Agreements:** Signed documents confirming the resolution terms.
- **Payment Confirmations:** Records of repair costs or settlement payouts.

4. Audit Trail

Select the **Audit Trail** tab for a detailed compliance record:

- **Action Log:** View a comprehensive list of every action taken on the claim file.
- **User Accountability:** See exactly **who** performed each action and **when** it occurred, ensuring full transparency and accountability throughout the process.

The Accessibility menu in your UI provides configurable **text size** and **color profile** options designed to help different users while meeting **WCAG 2.2 AAA** contrast and readability standards.image.jpg+1

Accessibility

Text size controls

- Three levels are available: **A (Normal 16px)**, **A+**, and **A++**, allowing users to increase text size for readability without breaking layout.
- This supports WCAG 2.2 success criteria on **Resize Text (1.4.4)** and **Reflow (1.4.10)** by letting users enlarge text while preserving content and functionality.

Color profile options

The **Color Profiles** section lets users switch to schemes optimized for different visual needs.

- **Default:** Standard color scheme, used when no adaptation is needed.
- **Deuteranopia** (Red–Green, green weak): Adjusts hues so red–green distinctions remain perceivable for users with this color-vision deficiency.
- **Protanopia** (Red–Green, red weak): Re-maps reds and related hues to maintain contrast and meaning for users with reduced red sensitivity.
- **Tritanopia** (Blue–Yellow): Adapts blue/yellow contrasts so critical UI states do not rely on those hues alone.
- **High Contrast:** Maximizes contrast between foreground and background for users with low vision or glare sensitivity, supporting **Contrast (Minimum/Enhanced – 1.4.3, 1.4.6)**

The footer note “All profiles meet WCAG 2.2 AAA standards for contrast and readability” explicitly states that these presets are pre-tuned to exceed the highest recommended contrast ratio requirements.

Motion and low-vision aids

- **Reduced Motion:** Minimizes animations and transitions to help users with vestibular disorders or motion sensitivity, aligning with **Reduced Motion (2.3.x)** guidance.
- **Low Vision:** Provides an enhanced-visibility preset that combines larger text, stronger contrast, and simplified visuals to support users with low acuity, consistent with WCAG requirements around **Adaptable (1.3.x)** and **Distinguishable (1.4.x)**.

How this maps to WCAG 2.2

Your Accessibility feature, as shown in the screenshots, is positioned as a single entry point that:

- Helps meet **Perceivable** guidelines: text resizing, high contrast, color-blind-safe palettes, and low-vision presets support sections 1.3 and 1.4 of WCAG 2.2.
- Addresses **Operable / Understandable** needs by giving clear, labeled controls (e.g., “Text Size”, “High Contrast”, “Reduced Motion”) that users can toggle without affecting functionality.

If you want, the next step can be a short WCAG 2.2 mapping table per control (criterion ID, level, how your UI satisfies it) that you can paste directly into product documentation.

Quick Recap

- Claims Operations Dashboard provides comprehensive claim management for operators.
 - Three complexity levels organize claims: High Complex, Medium Complex, and Non Complex.
 - Five processing stages guide claims from intake to final status.
 - Ora AI automates processing, extracting data, validating coverage, and routing workflows.
 - Manual intervention required when blockers occur, such as missing documentation.
 - Operators request missing documents via email, generated automatically by Ora AI.
 - Amber outline distinguishes claims with manual intervention for ongoing monitoring.
 - Visual indicators (blue for new, green for transitioning, amber for manual) show claim state.
 - Pause and resume controls allow operators to stop and restart automated processing.
 - Claims Archive provides access to completed claims with filtering and search capabilities.
 - Real-time notifications alert operators to new claims immediately upon receipt.
-
