

Summarize my data - User Guide

Module Overview

The Summarize my data module enables users to summarize lengthy documents or submissions using AI.

It's designed for Underwriters who handle large text-heavy reports and need concise, accurate summaries tailored to their needs.

Home Screen - Summarize My Data

This is the main landing screen that users see when they open the Summarize My Data (SMD) module.

Key Purpose

It serves as the starting point for users to begin interacting with the AI - either by uploading a document or typing their first summarization prompt.

When the user sends their first prompt, the screen splits into an interactive 3-panel interface where users can upload documents, chat with the AI to generate summaries, view results, and manage their saved templates and histories.

Accessing the SMD module

This is the main application dashboard, where users can access different modules within the MEA platform. Each tile represents a functional area such as data ingestion, validation, enhancement, and summarization.

To open the Summarize My Data module:

1. Locate the **“Summarize My Data”** tile in the app grid.
2. Click on the tile to launch the SMD workspace.

This will take the user to the SMD Home Screen — where they can upload documents, give prompts, and start generating summaries.

Left Panel - Summary Display Area

The left section shows the summarized output generated by the AI.

ZAM-103ST Gas Leak Preliminary Report

EXECUTIVE SUMMARY

This Preliminary Report concerns an uncontrolled flow of water, sand and gas (with hydrogen sulphide) from the ZAM-103ST well, which developed on December 10, 2019 at the ZAF-1 wellhead platform located in the Zatchi Field, Offshore Republic of Congo. In late December, two attempts were made to perform a dynamic kill operation by bullheading kill weight fluid into the outer annuli of the well using the STIM STAR ANGOLA well stimulation vessel, however, both attempts proved unsuccessful.

The Operator spudded the RW-1 relief well on January 1, 2020 and attempted to kill the well without success. In late January, the RW-1 well was partially plugged and abandoned, and the sidetrack well RW-1ST was drilled. The RW-1ST kill operation was successful in stopping the flow from the ZAM-103ST well, however, well RW-1ST began to suffer significant fluid losses and required continuously filling with seawater by the SAPPHIRE DRILLER rig to maintain hydrostatic control of the well incident.

WELL HISTORY

- The Original ZAM-103 Well**

The original well ZAM-103 is one of eight wells which constituted the first phase of the development of the Zatchi Field in May 1988. The ZAM-103 well spudded by the CONGOFOR owned drilling rig NAVIFOR II on May 29, 1988. The well was drilled to a total depth of 1,003 metres measured depth (mMD) on July 7, 1988, targeting both "D" and "E" reservoirs. The well was then completed over the period of September 25 to October 3, 1988.
- Partial Abandonment and Drilling of Sidetrack Well ZAM-103ST**

In May 2006, the Operator made the decision to partially abandon the ZAM-103 well due to a low flow rate from the "D" and "E" reservoirs. Oil production would then be restored by

Rephrase

Elaborate More

Remove this

Key Features:

- Displays the final summary in a clean, readable format

- Actions available: Users can highlight any part of the summary to access quick options like Rephrase, Elaborate More & Delete.
- Download button - to export the summary as PDF
- Rephrase - Allows users to reword a selected sentence or paragraph for better clarity or tone.
- Elaborate more - Expands on a selected point or paragraph if the user wants more detailed information.
- Delete - Deletes the selected paragraph or sentence.

The summary updates automatically as the user refines it through the chat panel.

Center Panel - AI Conversation Area

This is where users interact directly with Ora AI to generate or refine summaries. It follows a simple chat format so users can guide the AI naturally.

Step-by-Step Flow:

1. Upload a document:

Users can upload a document and give a prompt specifying their needs.

2. AI Preview:

Once uploaded, the file card appears (showing name and file type).

Example: *Client Risk Application Form – 836473 (PDF)*

3. User Prompt:

The user gives AI instructions like:

- “Summarize in less than 1000 words.”
- “Focus on risk and financial sections.”
- “Ignore introductory parts.”

4. AI Response:

Ora AI processes the document and displays the summarized result.

Users can chat further to refine tone, focus, or depth.

5. Optional Action:

- Save the chat as a **Template** for reuse later.
- Share the summary with other users.

Chat Features:

- **Typing Indicator:** Shows AI is processing
- **Text Box:** For entering queries or commands
- **Save Template Button:** The Save Template button allows users to save their current conversation and summarization preferences as a reusable template.

When a user clicks on “Save as Template” a popup window opens, giving them the option to review and save extracted parameters from the conversation.

A 'Save Template' popup dialog with a green border and a close button (X) in the top right corner. The dialog is divided into two main sections. The top section, titled 'Extracted Parameters', lists details identified by AI: 'Summary Type : Deep-dive technical summary', 'Word Limit : Not more than 1000 words', 'Focus Areas : Partial Abandonment, Drilling Phases', 'Exclude / Skip : Financial indicators', and 'Tone / Style : Professional and factual'. The bottom section contains three input fields: a text box with 'Well Operation Summary Template', a dropdown menu labeled 'Select a Category', and a button with a plus icon and the text 'Add a new category'. At the bottom of the dialog are two buttons: a green 'Create' button and a white 'Cancel' button with a green border.

Save Template ✕

Extracted Parameters

Summary Type : Deep-dive technical summary
Word Limit : Not more than 1000 words
Focus Areas : Partial Abandonment, Drilling Phases
Exclude / Skip : Financial indicators
Tone / Style : Professional and factual

Well Operation Summary Template

Select a Category ▼

+ Add a new category

Create Cancel

Popup Includes:

- **Extracted Parameters:** Key details automatically identified by the AI (e.g., summary type, word limit, focus areas, tone, etc.).
- **Template Name Field:** Input box to name the new template.
- **Select Category Dropdown:** Displays all existing categories available under “Saved Templates.”
- **Add a New Category:** Option to create a new category if the desired one doesn’t exist.

After filling in the details, users can click Create to save the template or Cancel to exit without saving.

Right Panel — Library & Management Area

The Library helps users manage all their summaries and templates efficiently.

At the top is a search bar where users can find either a saved summary (summation) or a saved template.

Search bar

The search looks for the keyword in:

- Summation title
- Saved template title
- Summary text
- Conversation summary

Below search, it's divided into two sections: **Summation History** and **Saved Templates**.

Summation History

Shows all previously created summaries.

Each summary thread includes:

- **Title:** (e.g., “Insurance Tools Summary”)
- **Date Modified:** Timestamp of the last update
- **Options (⋮):** When clicked on the 3 dots on the side, users are presented with 3 options, mentioned below :

- ◦ Share
- Rename
- Delete

A “+” icon at the top allows users to start a new summarization chat.

Saved Templates

This section stores reusable summarization templates categorized by topic or use case.

Each template includes:

- Template Name
- Category (e.g., “General,” “SoV,” “Risk Reports”)
- Summary preferences like word limit, tone, focus areas, and exclusions

The “+” icon allows the users to create a new template category

A screenshot of a 'Create Category' dialog box. The dialog has a title bar with the text 'Create Category' and a close button (X). Inside the dialog, there's a label 'Category Name' above a text input field. The input field contains the placeholder text 'e.g., Client Reports'. Below the input field, there are two buttons: a green 'Create' button and a white 'Cancel' button with a grey border.

Save as Template — Smart Extraction Feature

When users click “Save as Template”, Ora AI intelligently extracts key summarization rules from the ongoing conversation.

How It Works:

1. AI reviews the chat between the user and itself.
2. It identifies important instructions such as:
 - Word limit
 - Focus topics
 - Exclusions
 - Tone and format preferences
3. A popup appears after clicking on "Save template" button, showing these auto-detected points under a heading like: "Extracted Parameters"
4. The user can:
 - Review the details
 - Name the template (e.g., *ZAM-103ST Summary Template*)
 - Choose a category to save it under

Once saved, it appears in the **Saved Templates** section of the Library.

Reference: Expected AI Behavior for Summarization

The screenshots below illustrate how the **AI model** should respond during the summarization process. These examples have been taken from ChatGPT and are intended to **demonstrate the ideal interaction flow** and **response format** expected in the “Summarize My Data (SMD)” module.

Key Functional Flow

Below is the overall journey of how the module works:

1. Upload a document
2. AI generates initial summary
3. User refines summary via chat
4. AI updates summary in real-time (left panel)

5. User saves or shares summary
6. Optionally save as template
7. Template stored for future reuse
8. Access and manage templates/summaries via Library
