

mea Underwriting for Moonrock

Figma Link: [📱 Moonrock Demo \(mea Underwriting\)](#)

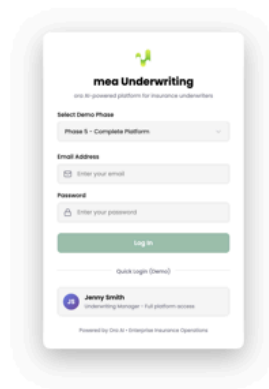

PHASE I - Initial Foundation

Overview

mea Underwriting is a platform designed to support underwriters in reviewing, pricing, and managing insurance submissions from start to finish. It brings all parts of the underwriting process into one place, so users can move from intake to binding in a clear and structured way.

The platform helps organise incoming submissions, present key information in a consistent format, and guide each submission through different stages such as data validation, underwriting, quoting, and binding. This ensures that decisions are made based on complete and reliable information.

Login Screen

The login screen is the starting point for me Underwriting. It allows users to choose the demo phase they want to view, then sign in using the standard username and password fields or the Quick Login option.

The **Select Demo Phase** dropdown is used to choose the version of the product to display during the demo. This helps users understand what is available in each release phase, starting with **Phase 1: Initial Foundation** and moving through to **Phase 5: Complete Platform**. These are all the Phases:

Select Demo Phase

Phase 1 - Initial Foundation

Phase 1 - Initial Foundation

Phase 2 - Core Functionality

Phase 3 - Advanced Features

Phase 4 - Enhanced Capabilities

Phase 5 - Complete Platform

Phase 1: Initial Foundation

Phase 2: Core Functionality

Phase 3: Advanced Features

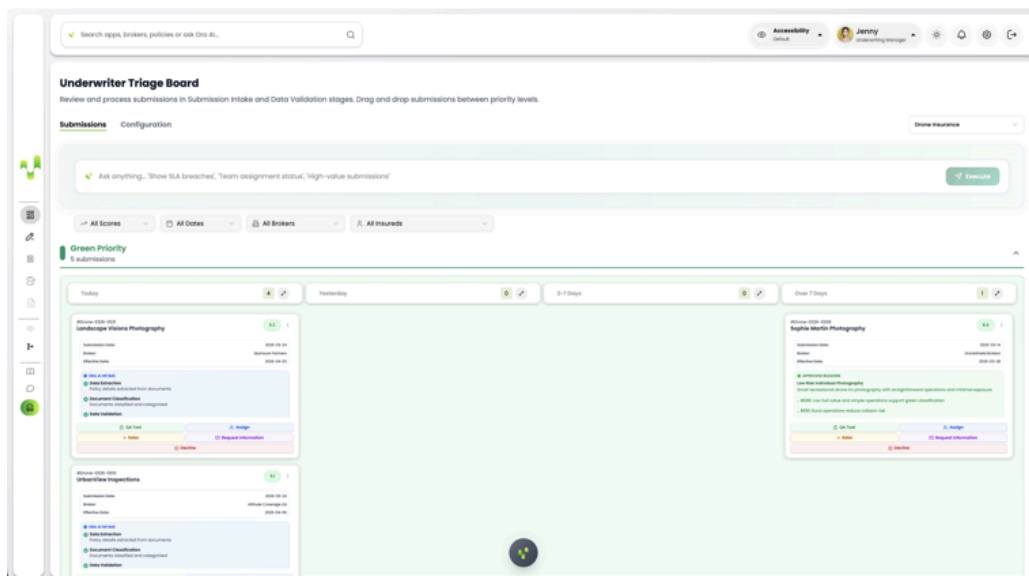

Phase 4: Enhanced Capabilities

Phase 5: Complete Platform

Users can then sign in with demo credentials or select **Jenny Smith** from Quick Login to enter the system directly with the appropriate access for the selected phase.

Underwriter Triage Board

The **Underwriter Triage Board** is the first screen users see after logging in to **Phase 1: Initial Foundation**. It is used to review, sort, and process submissions that have entered the system. The board gives underwriters a clear view of which submissions need attention first, based on both **submission age** and **risk priority**.

Purpose of the screen

This screen helps underwriters:

- see all new submissions in one place
- group them by how long they have been in the queue
- review the most important items first
- take the next action on each submission

How the board is organised

Green Priority	5 submissions	▼
Amber Priority	2 submissions	▼
Red Priority	3 submissions	▼

Submissions are displayed in three priority sections:

- **Green Priority**

These are submissions with a high risk score and are generally in better shape because they have passed most of the underwriting rules already set in the system.

- **Amber Priority**

These submissions need review. They may be partially complete or may require an underwriter to make a decision before they can move forward.

- **Red Priority**

These submissions have a lower risk score and may require more attention, more checks, or a decision to decline.

Today	4	▼	Yesterday	0	▼	3-7 Days	0	▼	Over 7 Days	1	▼
-------	---	---	-----------	---	---	----------	---	---	-------------	---	---

Within each priority section, submissions are also grouped by date:

- **Today**
- **Yesterday**
- **2-7 Days**
- **Over 7 Days**

Note: These groups will be customised from customer to customer.

Filters at the top of the screen

↗ All Scores	▼	📅 All Dates	▼	📄 All Brokers	▼	👤 All Insureds	▼
--------------	---	-------------	---	---------------	---	----------------	---

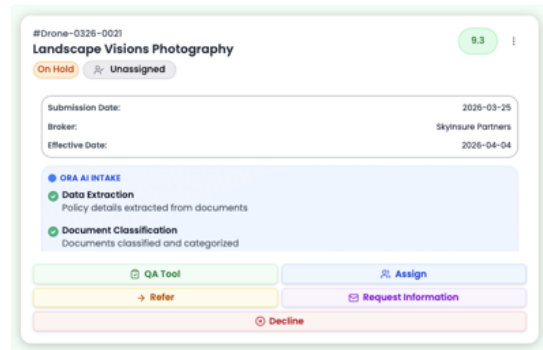

The filter bar allows users to narrow down submissions shown on the board by:

- score - High (7-10), Medium (4-6.9), and Low (0-3.9)
- date - Today, Yesterday, 2-7 Days, and Over 7 days
- broker

- insured

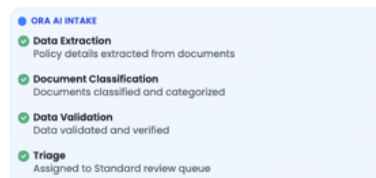

Note: These filters only apply to submissions currently on the triage board. Archived submissions are not shown here.

Submission cards

Each submission appears as a card. The card shows the key details needed for quick review, such as:

- submission reference
- insured name
- broker
- submission date
- effective date
- risk score
- review status
- Assignee (Like Unassigned which is the default value)
- Submission Status (Like On Hold)

These are the stages of oraAI Intake:

- Data Extraction - Policy details extracted from documents
- Document Classification - Documents classified and categorized
- Data Validation - Data validated and verified
- Triage - Assigned to Standard review queue

- Underwriter Reviewed - Awaiting underwriter review...

The card also shows the underwriting reasoning or AI summary, so the user can quickly understand why the submission has been placed in that priority band. For Approved Submissions, we reference the approved rules with the approved rule numbers from SOP Rule Configuration.

Actions on each card

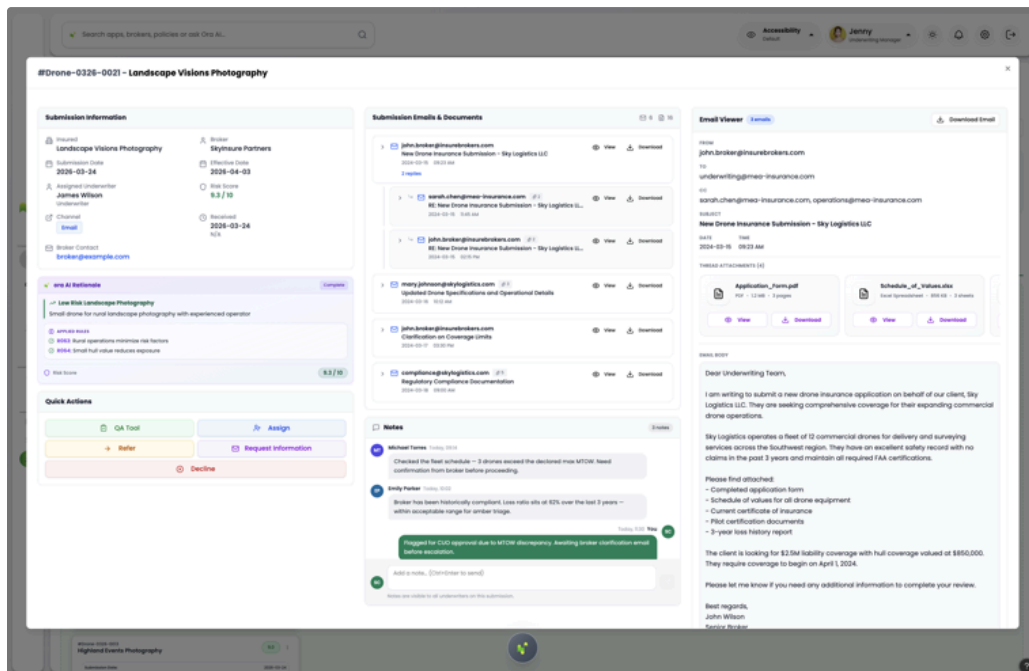

Each submission card includes the main actions available to the underwriter:

- **QA Tool** - Takes the user to the QA Tool
- **Assign** - Used to assign a submission between underwriters or themselves with a comment
- **Refer** - Used to refer a submission internally or externally
- **Request Information** - Used to request information from Broker via email
- **Decline** - Used to decline a submission with an email

Clicking on a submission opens up information about the submission

Submission Detail Screen

This screen opens when a user clicks on a submission from the triage board. It gives a full view of everything connected to that submission in one place, including the submission summary, email thread, attachments, and notes from other underwriters. The purpose of this screen is to help the underwriter review the full context before making a decision or taking action.

1. Submission Information

broker@example.com

Broker

Altitude Coverage Ltd

Effective Date

2026-04-06

Risk Score

9.1 / 10

Received

2026-03-24

N/A

This section appears on the left side of the screen and gives a quick summary of the submission. It helps the user understand the most important details before reading the full email thread.

What it shows

- Insured name
- Broker name
- Submission date
- Effective date
- Assigned underwriter
- Risk score
- Channel
- Received date
- Broker contact

This section is used for a fast review of the submission at a glance. It gives the underwriter the key facts needed to understand who the submission is for, when it was received, and how risky it appears to be.

2. ora AI Rationale

ora AI Rationale

Analysis Complete

Low Risk Individual Photography

Sophie Martin operates a single DJI Mini 3 Pro for freelance wedding and event photography across rural Cheshire and North Wales. All operations are VLOS in uncontrolled Class G airspace with no commercial cargo, no BVLOS, and no night operations declared. Hull value of £5,800 is well within individual appetite limits. This is a straightforward single-risk, low-exposure submission.

Pilot documentation is incomplete — license number and training certificate not yet received. Not blocking for low-value recreational risk but required before binding.

BREACHED TRIAGE RULES

R092: Pilot license number and training certificate not yet received — required before binding

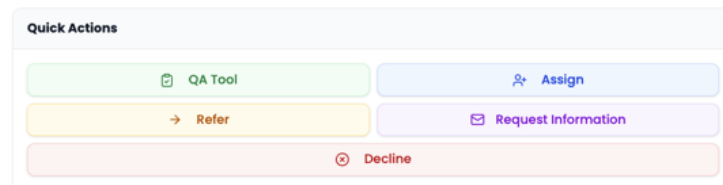

This section sits below the submission information and gives the platform’s reasoning for the current risk assessment. It helps the underwriter understand why the submission has been scored in a certain way.

What it shows

- Risk Rationale of the submission
- Breached Triage Rules, if any

This section provides a short explanation of the risk position. It helps the underwriter quickly see why the submission has been marked as low, medium, or high priority and what factors influenced that result.

3. Quick Actions

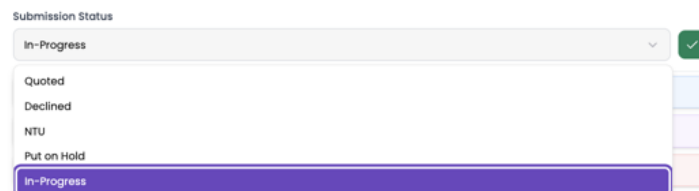

This section gives the main actions the underwriter can take on the submission. These actions are placed here so the user can make a decision without leaving the screen.

What it shows

- **Submission Status** - Lets the user mark a submission as Quoted, Declined, NTU (Not taken up), Put on hold, and In-progress
- **QA Tool** - Takes the user to the QA Tool
- **Assign** - Used to assign a submission between underwriters or themselves with a comment
- **Refer** - Used to refer a submission internally or externally
- **Request Information** - Used to request information from Broker via email
- **Decline** - Used to decline a submission with an email

These buttons allow the underwriter to move the submission forward. Depending on the review outcome, the user can assign the submission, ask for more information, send it for referral, or decline it.

3.1 Submission Status

The **Submission Status** action allows the underwriter to update the current stage of a submission manually. This is used when the underwriter has completed their review and wants to record the result directly on the submission.

When a status is selected, the submission may move to another stage, remain visible with a status chip, or move out of the active triage board and into the archive.

Quoted

When the underwriter selects **Quoted**, the submission is moved to the quote stage. It will no longer appear on the Triage Board, because it has moved forward in the workflow.

Use this when:

- The submission has been reviewed
- Pricing has been completed
- The next step is to prepare or issue the quote

What happens:

- The submission is removed from the triage queue
- The status is updated to Quoted
- The submission becomes available in the quote stage

Declined

When the underwriter selects **Declined**, the submission is marked as declined and removed from the active queue. It is then moved to the archive.

Use this when:

- The risk is not suitable for the company
- The submission does not meet the underwriting appetite
- The underwriter does not want to continue with the submission

What happens:

- The submission is removed from the triage board
- The status is updated to Declined
- The submission is archived

This option does not send a broker email by itself. It only updates the internal status.

NTU (Not Taken Up)

When the underwriter selects **NTU**, the submission is marked as not taken up and removed from the active queue. It is then moved to the archive.

Use this when:

- The broker or insured does not proceed

- The opportunity is no longer active
- The submission will not be progressed further

What happens:

- The submission is removed from the triage board
- The status is updated to NTU
- The submission is archived

This option is used for submissions that do not move forward, but are not necessarily declined on underwriting grounds.

Put on Hold

When the underwriter selects **Put on Hold**, the submission remains in the triage board, but it is marked with a hold status chip.

Use this when:

- The underwriter needs more time to review
- There is a temporary issue that does not require a decline
- The submission should stay visible but paused

What happens:

- The submission stays on the board
- A hold chip appears on the submission card
- The submission remains available for later review

This is useful when the submission is still active, but not ready to move forward yet.

In-Progress

When the underwriter selects **In-Progress**, the submission stays on the triage board and is marked with an in-progress chip.

Use this when:

- The submission is being actively reviewed
- The underwriter has started work on it
- The submission is not yet ready for a final decision

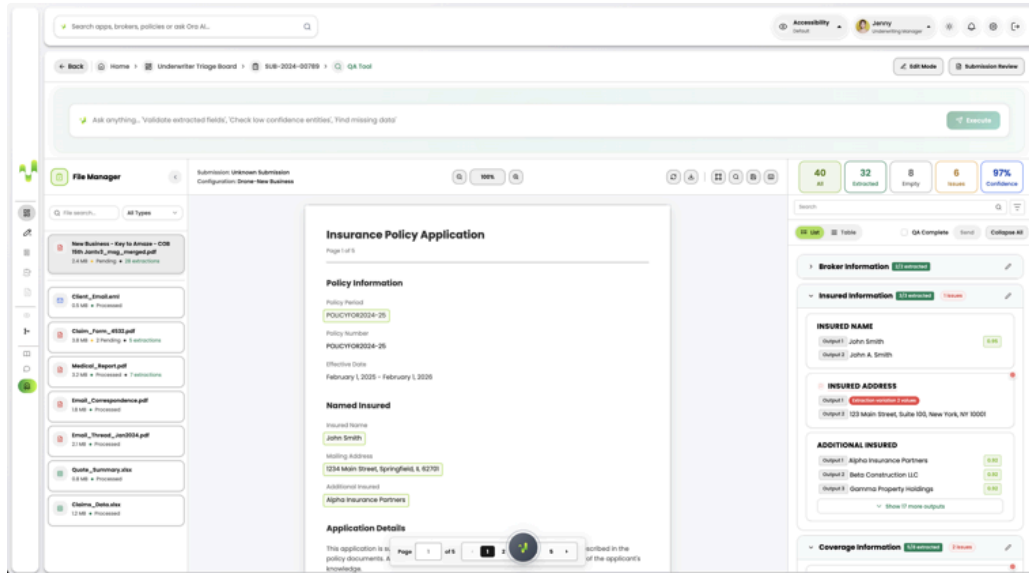

What happens:

- The submission stays visible on the board

- A status chip appears on the submission card
- The submission remains in the active working queue

This helps identify submissions that are already being handled.

3.2 QA Tool

The **QA Tool** opens the quality assurance view for the submission. This is used to check the submission details, review extracted data, and confirm that the information has been captured correctly.

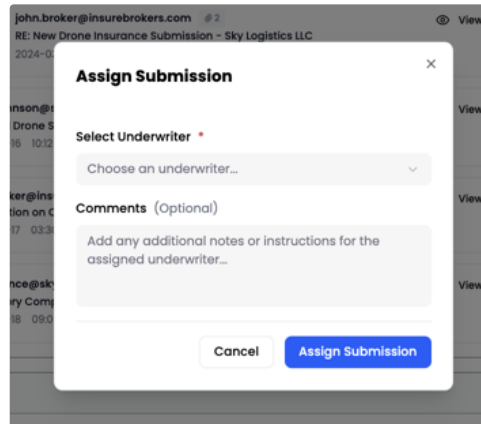

Use this when:

- The underwriter wants to review the submission in more detail
- The user needs to confirm the data before taking action
- There is a need to check the extracted values against the source documents

What happens:

- The submission opens in the QA Tool
- The user can review the data and supporting information
- The user can continue with the next action after review

3.3 Assign

A screenshot of a web application showing an 'Assign Submission' modal. The modal has a title bar with a close button. Below the title, there is a 'Select Underwriter' section with a dropdown menu labeled 'Choose an underwriter...'. Below that is a 'Comments (Optional)' section with a text area labeled 'Add any additional notes or instructions for the assigned underwriter...'. At the bottom, there are two buttons: 'Cancel' and 'Assign Submission'.

The **Assign** action is used to send the submission to another underwriter or assign it to yourself. A comment can be added to explain why the submission is being assigned.

Use this when:

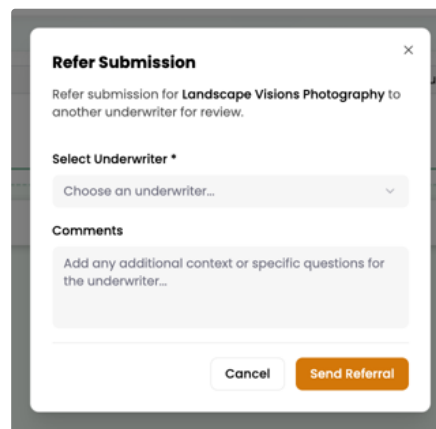

- The submission needs review by another underwriter
- The submission should be handled by a specific person
- The current underwriter wants to pass it on with context

What happens:

- The submission is assigned to the selected person
- The comment is saved with the assignment

By default, all submissions stay unassigned.

3.4 Refer

A screenshot of a web application showing a 'Refer Submission' modal. The modal has a title bar with a close button. Below the title, there is a subtitle: 'Refer submission for Landscape Visions Photography to another underwriter for review.' Below that is a 'Select Underwriter' section with a dropdown menu labeled 'Choose an underwriter...'. Below that is a 'Comments' section with a text area labeled 'Add any additional context or specific questions for the underwriter...'. At the bottom, there are two buttons: 'Cancel' and 'Send Referral'.

The **Refer** action is used when the submission needs to be referred internally to another Underwriter for further review.

Use this when:

- The submission is outside the current underwriter's authority
- Additional approval is needed
- The risk requires a specialist review, like a CUO

What happens:

- The submission is referred to the relevant party
- The referral reason is recorded
- The submission remains tracked until a response is received

This ensures that submissions are escalated in a controlled way.

3.5 Request

The screenshot shows a web-based email composition interface titled "Request Information from Broker". It includes fields for "From" (sarah.chen@mea-insurance.com), "To" (broker@example.com), "CC" (cc@example.com (optional)), and "BCC" (bcc@example.com (optional)). The "Subject" field contains "Documents missing". The "Email Body" field contains a pre-drafted email text. A "Generate with ora AI" button is located in the top right of the email body field. At the bottom right, there are "Cancel" and "Send to Broker" buttons. A small note at the bottom left of the email body field states: "ora AI will generate the email body based on your subject line".

Email Body *

Dear Skyinsure Partners,

Thank you for submitting the insurance application for Landscape Visions Photography. Upon review of the submission (Reference: SUB-2024-021), we require additional documentation to proceed with our underwriting assessment.

Please provide the following at your earliest convenience:

- [Specific document type needed]
- [Additional information required]

Once received, we will continue our evaluation and provide you with our decision promptly.

Best regards,
Sarah Chen
Senior Underwriter
mea Insurance

ora AI will generate the email body based on your subject line

[Generate with ora AI](#)

[Cancel](#) [Send to Broker](#)

The **Request Information** action is used to ask the broker for more details by email.

Use this when:

- Important information is missing
- The submission cannot move forward without clarification
- The underwriter needs supporting documents or answers

What happens:

- An email request is prepared or sent to the broker
- The submission remains in the workflow until the information is received
- The user can continue reviewing other submissions

This action is used when the submission is still valid, but not yet complete.

3.6 Decline

The screenshot shows a web form titled "Send Decline Email - #Drone-0326-0021 - Landscape Visions Photography". The form has several sections:

- From:** jerry.arnthlighting.com
- To:** philip.mathew@skyreure.com
- CC:** (empty)
- BCC:** (empty)
- Subject:** Re: Submission Declined - #Drone-0326-0021
- Email Body:** A large text area containing a pre-filled email template. The template starts with "Dear Philip Mathew," and "Thank you for submitting the insurance proposal for #Drone-0326-0021 - Landscape Visions Photography with an effective date of 4/1/2026." It then states, "After careful review and analysis by our underwriting team, we regret to inform you that we must decline this submission. Our decision is based on the following factors:" followed by a bulleted list: "Risk profile does not align with current underwriting guidelines" and "Insufficient information provided for proper risk assessment". It includes a "Risk Assessment Summary" with details like "Submission Score 8.5/10", "Policy Classification: 0001N", and "Underwriter: James Wilson, Underwriter". The email concludes with a polite note about future opportunities and contact information for James Wilson.

At the bottom right of the form, there are two buttons: "Cancel" and "Send Decline Email".

The **Decline** action is used to reject the submission and send a decline email to the broker.

Use this when:

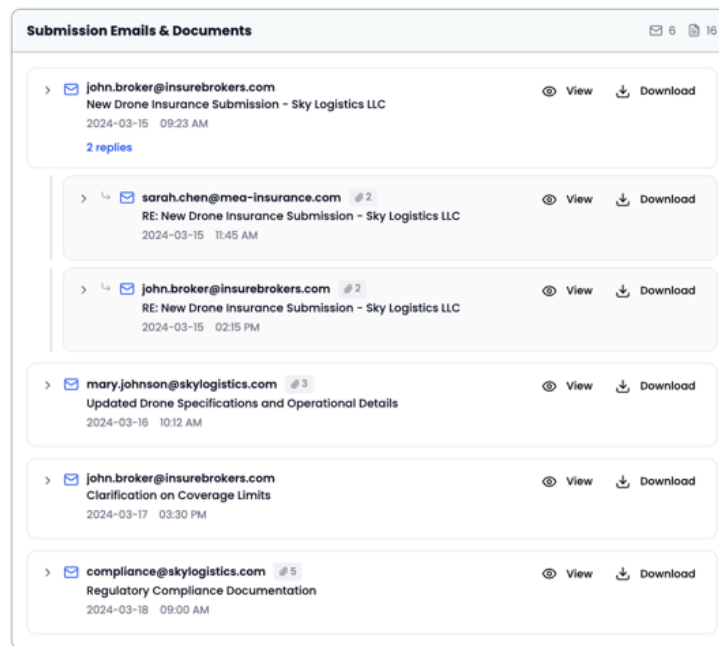

- The risk does not fit underwriting appetite
- The submission is too weak or incomplete
- The underwriter has decided not to proceed

What happens:

- The submission is declined
- A broker email is generated or sent
- The submission is removed from the active queue

This should be used when the decision is final, and the submission should not progress further.

4. Submission Emails and Documents

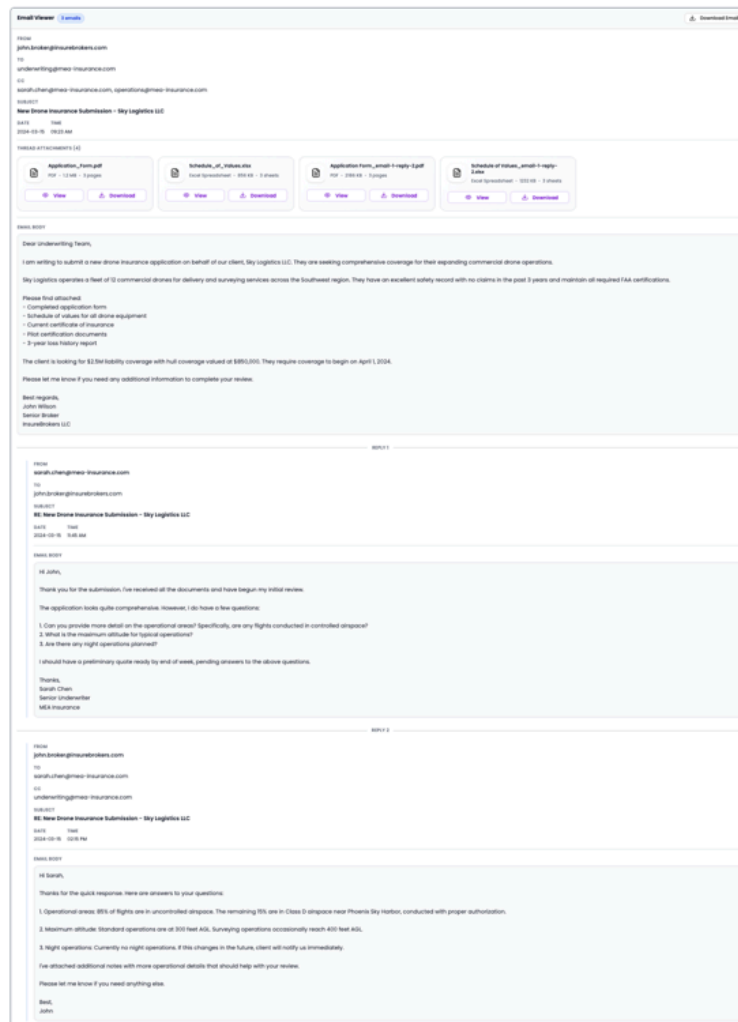

This section appears in the middle of the screen and shows the full email thread connected to the submission. It also shows all related documents that were received with the submission.

What it shows

- Entire email thread
- Individual emails within the thread
- Email sender and subject
- Date and time of each email
- View and download options for each item

This section acts as the submission history area. It contains the full email conversation and related documents so the underwriter can review the original submission and any follow-up replies in one place.

5. Email Viewer

This section appears on the right side of the screen. When a user clicks on an email in the thread, the selected email opens here for reading.

What it shows

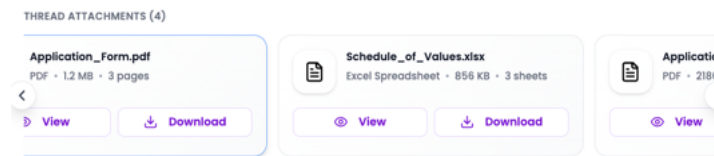

- Sender
- Recipient
- CC recipients
- Subject
- Date and time
- Full email body
- Attached files

The email viewer displays the selected message in full. The user can click on any email from the thread to open it here and read the message without leaving the submission screen.

Important behaviours

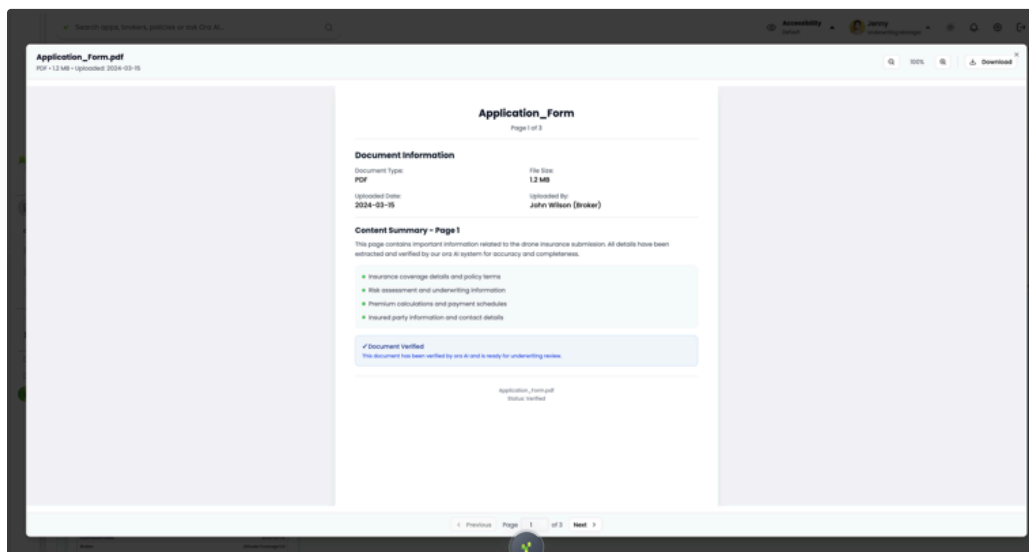

- Clicking an email opens it in the viewer.
- Clicking another email replaces the currently open email.
- Clicking the same email again closes it.

6. Attachments Carousel

At the top of the email viewer, all attachments are displayed in a horizontal scroll format. This makes it easy to see all related files without crowding the screen.

What it shows

- PDF files
- Word documents
- Spreadsheet files
- Other similar file types

Attachments are shown as cards in a horizontal carousel. The user can scroll through them and open any file directly from the screen.

Supported file types

Schedule_of_Values.xlsx

7. Notes Section

Notes 3 notes

MT Michael Torres Today, 09:14

Checked the fleet schedule – 3 drones exceed the declared max MTOW. Need confirmation from broker before proceeding.

EP Emily Parker Today, 10:02

Broker has been historically compliant. Loss ratio sits at 62% over the last 3 years – within acceptable range for amber triage.

Today, 11:30 **You** **SC**

Flagged for CUO approval due to MTOW discrepancy. Awaiting broker clarification email before escalation.

Add a note... (Ctrl+Enter to send)

Notes are visible to all underwriters on this submission.

This section appears below the email and attachment area. It shows internal notes added by other underwriters who have already reviewed the submission.

What it shows

- Notes from underwriters
- Review comments
- Rationale for decisions

- Internal discussion points
- Time and author of each note

The notes section helps the team share context on the submission. It shows previous comments, observations, and any actions already taken by other underwriters.

User Flow for Submission Details

A simple way to look at Submission details is:

- Start with the **Submission Information** to understand the risk.
 - Review the **Ora AI Rationale** to see why it has been prioritised.
 - Use **Quick Actions** to decide the next step.
 - Read the **Email Thread** and open the relevant message in the **Email Viewer**.
 - Check the **Attachments** for supporting documents.
 - Review the **Notes** section for internal comments from other underwriters.
-
